

Supplemental Table 2. Adjusted analysis of the association between mean EQ-5D-3L utility and thyroid status in Korean older adults (manual-based thyroid stimulating hormone reference range)

	Overt hypothyroid	Subclinical hypothyroid	Euthyroid	Subclinical hyperthyroid
EQ-5D-3L (95% confidence interval)	0.968 (0.897–1.038)	0.906 (0.877–0.934)	0.908 (0.900–0.917)	0.901 (0.822–0.980)
P-value	0.106	0.851	Reference	0.855

Adjusted mean EQ-5D-3L utility values calculated by linear regression after adjustments for age, sex, body mass index, income, education, employment, smoking, drinking, physical activity, hypertension, dyslipidemia, diabetes mellitus, hemoglobin, and TPO antibody levels.

EQ-5D-3L, EuroQol three-level version.
