

Supplemental Figure 1. Association between health-related quality of life and thyroid status at baseline of euthyroid (manual-based TSH reference range). Adjusted mean EQ-5D-3L utility scores calculated by linear regression model analysis in the total population using manual-based TSH reference range. EQ-5D-3L, adjusted mean utility scores based on the Korean EQ-5D-3L index (normal range, -0.171 to 1.000); manual-based TSH reference range: 0.35–5.50 mIU/L. TSH, thyroid stimulating hormone; EQ-5D-3L, EuroQol three-level version; OHypo, overt hypothyroid; SCHypo, subclinical hypothyroid; SCHyper, subclinical hyperthyroid. *P<0.05. **P<0.01.
